

COMPLETE

5-HOUR TRADING CURRICULUM

TRAINER VERSION — TradingSmart.AI

A structured professional trading curriculum with detailed explanations, live demos, risk frameworks, AI integration and full platform walkthrough.

H1	H2	H3	H4	H5
Market Foundations	Chart Reading	Strategy Building	AI & Automation	Full System Execution

TABLE OF CONTENTS

Platform Overview

TradingSmart.AI — How the Software Helps You

- Live Dashboard
- AI Trading Analysis
- Backtesting Engine
- Active Trade Tracker

Hour 1

Market Foundations (60 mins)

- Module 1: What is a Market
- Module 2: How Price Moves
- Module 3: Market Participants
- Module 4: Types of Trading
- Module 5: Why Most Traders Fail

Hour 2

Chart Reading (60 mins)

- Module 1: Candlesticks
- Module 2: Trend Analysis
- Module 3: Support & Resistance
- Module 4: Breakout Patterns
- Module 5: Basic Indicators (MA & RSI)

Hour 3

Strategy Building (60 mins)

- Module 1: What is a Strategy
- Module 2-3: Components & Simple Example
- Module 4: Risk Management (The 1-2% Rule)
- Module 5: Backtesting

Hour 4

AI + Automation (60 mins)

- Module 1-2: Manual Limitations vs Algo Trading
- Module 3: AI Signal Analysis
- Module 4: How Automation Helps
- Module 5: Live Demo

Hour 5

Full System Execution (60 mins)

- Module 1-2: System Flow & Live Execution

Module 3: Live Results

Module 4: Real Expectations

Module 5: Next Steps

PLATFORM OVERVIEW

tradingsmart.ai

TradingSmart.AI — How the Software Helps You Trade Smarter

TradingSmart.AI is a complete algorithmic trading platform that removes emotion, adds scientific discipline, and automates every aspect of your trading workflow. Below are the 4 core features you will use daily.

FEATURE 1

LIVE DASHBOARD | tradingsmart.ai/home

The Live Dashboard gives you real-time candlestick charts for Bitcoin (BTC), Apple (AAPL), EUR/USD, and Gold — all on a single screen. At the top of the dashboard you can see the current asset price (e.g. BTC at USD 72,903.59 / -0.10% LIVE). Data is streamed directly from Yahoo Finance with live candlestick updates. A live news ticker from Economic Times runs at the bottom of the chart.

Live Price Feed	Real-time candlestick chart BTC, AAPL, EUR/USD, Gold No need to switch platforms
Multi-Asset View	Switch between assets in 1 click Monitor everything from one dashboard Full portfolio visibility
Market News	Live feed from Economic Times Context + price = better decisions Never trade without context
One-Click to Algo	Open Live Algo Trading directly Zero friction from signal to execution Seamless workflow

FEATURE 2

AI TRADING ANALYSIS | tradingsmart.ai/ai-trading-analysis

The AI Trading Analysis screen simultaneously runs three different trading strategies against the current market conditions for any asset. Each strategy is scored out of 100 across 7 modules: Market, Trend, Signal, Volume, Volatility, Risk-Reward, and TrapRisk. The system gives each strategy a grade (A/B/C) and a BUY or SELL recommendation.

STRATEGY	SIGNAL	SCORE	GRADE	ENTRY	SL	TP
Trend Following	BUY	58 / 100	Grade C	\$72,804	\$72,683	\$73,045
TF + Momentum	SELL	57 / 100	Grade C	\$72,745	\$72,866	\$72,502
Mean Reversion	BUY	65 / 100	Grade B	\$72,750	\$72,620	\$73,010

Strongest Signal: Mean Reversion — BUY (Score 65/100, Grade B). Conflicting signals across strategies = wait for clarity above 75.

FEATURE 3

BACKTESTING ENGINE | tradingsmart.ai/backtest

Before you risk a single rupee live, the Backtesting Engine lets you simulate any strategy against 365 days of real historical market data. You define the strategy, stop-loss %, take-profit %, capital amount, and time range — then click 'Run Backtesting'. The AI-Filtered Comparison mode automatically tests hundreds of SL/TP combinations to show you which parameters historically performed best.

Test 365 Days of Data	Simulate your strategy on a full year of past market data — see exactly how it would have performed before risking a single rupee.
3 Backtest Modes	Strategy backtest, Simple BUY/SELL backtest, and Options ORB — covering all major trading styles.
AI-Filtered Results	Run AI comparison to find which SL/TP settings historically gave the best results automatically.
Builds Confidence	Seeing a strategy succeed on past data removes fear and gives you the conviction to execute live — with discipline.

FEATURE 4

ACTIVE TRADES & REAL-TIME P&L; | tradingsmart.ai/active-trades

The Active Trades screen is your live portfolio command center. It shows your total Profit & Loss in real-time (+Rs. 67,480.12 / +32.70% return on Rs. 2,06,336.49 invested), every open position with entry price, current price, and per-position P&L.; Paper Trade Mode lets you practice with virtual money first — paper trades appear in the same dashboard alongside live trades with zero risk.

METRIC	VALUE	WHAT IT MEANS
Total P&L; (Live)	+Rs. 67,480.12	Total profit across all open positions
Portfolio Return	+32.70%	Return on invested capital
Total Invested	Rs. 2,06,336.49	Sum of all position sizes
Active Positions	7 trades open	Live + paper trades visible simultaneously
Completed Trades	20 trades logged	Full history with strategy details

"One platform. Everything you need to trade with intelligence."

HOUR 1

What is a Market | How Price Moves | Market Participants | Types of Trading | Why Most Traders Fail

MARKET FOUNDATIONS

60 MINUTES

0 -> UNDERSTANDING

HOUR 1 — MARKET FOUNDATIONS

This hour lays the complete intellectual foundation for trading. By the end, the student must shift from 'trading is gambling' to 'trading is logical.' Every subsequent hour builds on this foundation. Do not rush — spend the full 60 minutes here.

MODULE 1 What is a Market

10 minutes

A market is any place where buyers and sellers come together to exchange assets. The four main markets your students will trade: Stocks, Cryptocurrency, Forex (currencies), and Commodities (gold, oil). Use the OLX analogy: when there are more buyers than sellers for a phone, the price goes up. When more sellers than buyers, the price drops. Markets are just this principle — at a massive, global scale.

ANALOGY

OLX / eBay: More buyers than sellers = price rises. More sellers = price falls. Markets are identical.

MODULE 2 How Price Moves

20 minutes

Price moves because of the continuous battle between buyers (bulls) and sellers (bears). This module removes the mystery from price action. Students often think price moves randomly — this session proves it doesn't.

CONDITION	RESULT	EXPLANATION
Demand > Supply	PRICE RISES	More buyers competing for limited supply pushes price up
Supply > Demand	PRICE FALLS	More sellers than buyers — sellers compete by lowering price
Supply = Demand	PRICE SIDEWAYS	Equilibrium — market consolidates before next move

Key phrase to drill: "Charts are just a visual representation of buying and selling pressure."

MODULE 3 Market Participants

15 minutes

Understanding who is moving the market is critical. There are two types of participants, and students must learn to think like institutions — not react like retail traders.

TYPE	RETAIL TRADERS	INSTITUTIONS (Smart Money)
Capital	Small — personal savings	Billions — funds, banks, hedge funds
Decision Making	Emotional — fear and greed	Structured — rules, models, systems
Market Impact	Minimal — react to price	High — can move entire markets
Information	News, social media	Research teams, proprietary data
Strategy	Random, inconsistent	Systematic, consistent, repeatable
KEY INSIGHT	Institutions move markets slowly and predictably. Retail traders who learn to read institutional moves gain a massive edge.	

MODULE 4

Types of Trading

10 minutes

TYPE	TIME HORIZON	IDEAL FOR	ATTENTION NEEDED
INTRADAY	Same day — positions closed by market close	Full-time traders	High — monitor screen actively
SWING TRADING	Days to weeks	Part-time traders	Medium — check 1-2x per day
LONG-TERM	Months to years	Investors, beginners	Low — weekly check is fine

Trainer tip: Ask each student which type fits their lifestyle BEFORE teaching strategy. This avoids misalignment.

MODULE 5

Why Most Traders Fail

15 minutes

This is the most emotionally impactful module of Hour 1. Students may have already lost money trading. Use empathy, not lecture. Help them understand the three root causes of failure — and how TradingSmart.AI addresses each one directly.

FAILURE CATEGORY	EXAMPLES	HOW TS.AI FIXES IT
1. Emotional Mistakes	Fear -> exit too early Greed -> hold too long FOMO trades	Algo execution removes emotion completely
2. Execution Mistakes	Late entries Missed trades Wrong position sizing	Automated entries at exact price levels

3. No System	Random decisions No consistent edge No rules	Rule-based strategy builder with backtesting
--------------	--	--

HOUR 1 -- COMPLETE

"Trading is logical, not gambling"

KEY TAKEAWAYS

- OK

Markets are driven by supply and demand — not luck
- OK

Retail traders are emotional; institutions are structured
- OK

3 main trading styles: Intraday, Swing, Long-term
- OK

Most traders fail due to emotion, execution, or lack of system

Hour 2

CHART READING

Candlesticks | Trend | Support & Resistance | Breakout | Basic Indicators

60 MINUTES

UNDERSTANDING -> CLARITY

Hour 2 — Chart Reading

Hour 2 transforms the student from someone who sees a confusing chart into someone who can confidently read price structure, identify trends, and spot key levels. This is the vocabulary of trading — without it, no strategy makes sense.

Module 1 Candlesticks

15 minutes

Candlestick charts are the universal language of trading. Each candle represents price movement during one time period (1 minute, 1 hour, 1 day — you choose the timeframe). A single candlestick tells you 4 things: Open, Close, High, and Low.

PART	WHAT IT SHOWS	COLOUR MEANING
Body (thick)	Distance between Open and Close	Green = Close > Open (price went UP)
Body (thick)	Distance between Open and Close	Red = Close < Open (price went DOWN)
Upper Wick (thin)	Highest price reached in the period	Shows rejection at high — sellers stepped in
Lower Wick (thin)	Lowest price reached in the period	Shows rejection at low — buyers stepped in
DEMO	Open TradingSmart.AI dashboard, zoom into the BTC chart, point to a green and red candle. Ask: which direction did price move? Let students answer before you explain.	

Module 2 Trend Analysis

20 minutes

The single most important concept in chart reading: 'The trend is your friend.' Trading with the trend dramatically increases your probability of success. There are three types of trends students must identify instantly.

TREND TYPE	DEFINITION	HOW TO IDENTIFY	TRADING ACTION
UPTREND	Price makes Higher Highs and Higher Lows	Each peak is higher than the last; each trough is higher than the last	BUY on pullbacks to support
DOWNTREND	Price makes Lower Lows and Lower Highs	Each trough lower than last; each rally lower than last	SELL/SHORT on bounces to resistance
SIDEWAYS	Price oscillates between two horizontal levels	No clear direction — price bounces between top and bottom	Trade the range or wait for breakout

MODULE 3 Support & Resistance

25 minutes

Support and Resistance (S&R;) are the most widely used technical concepts in trading. They represent price levels where the market has historically reversed direction. Critical trainer note: always teach ZONES, not exact lines — markets are not precise to the cent.

LEVEL	WHAT IT IS	WHY IT WORKS	TRADING USE
SUPPORT	Price level where buyers consistently enter	Market memory — players remember levels where price reversed before	Buy near support; place stop loss below it
RESISTANCE	Price level where sellers consistently enter	Sellers who bought at the top want to exit at breakeven	Sell near resistance; place stop loss above it
[!] TRAINER NOTE	When support breaks, it often BECOMES resistance (and vice versa). This is called 'Role Reversal' — a highly reliable trading signal.		

MODULE 4 Breakout Patterns

20 minutes

A breakout occurs when price moves decisively through a support or resistance level with increased volume. Breakouts trigger large moves because traders who were waiting for confirmation all enter simultaneously. False breakouts are common — teach students to wait for a candle to CLOSE above the level before entering.

BREAKOUT RULE

Wait for the candle to CLOSE above resistance (or below support). Do NOT enter on the wick — wait for confirmation.

MODULE 5 Basic Indicators — MA & RSI

20 minutes

Indicators are mathematical tools calculated from price data. Important warning: indicators CONFIRM what price is already showing — they do NOT predict. Teach only 2 indicators this hour. More indicators = more confusion, not more edge.

INDICATOR	WHAT IT MEASURES	HOW TO READ IT	LIMITATION
Moving Average (MA)	Average price over N periods — smooths out noise	Price above MA = uptrend Price below MA = downtrend Price crossing MA = signal	Lagging — shows what happened, not what will happen
RSI (Relative Strength Index)	Momentum — how fast price is moving up or down (0-100 scale)	RSI > 70 = Overbought (potential sell) RSI < 30 = Oversold (potential buy)	In strong trends, RSI can stay overbought/oversold for extended periods

Hour 2 -- Complete

"Charts are simple - I can see structure"

Key Takeaways

OK

Candles show buying/selling pressure — green = up, red = down

OK

Uptrend = Higher Highs / Higher Lows | Downtrend = Lower Lows / Lower Highs

OK

Support & Resistance are ZONES, not exact lines

OK

Moving Average = trend direction | RSI = momentum extremes

HOUR 3

What is a Strategy | Components | Simple Strategy | Risk Management | Backtesting

STRATEGY BUILDING

60 MINUTES

CLARITY -> CONFIDENCE

HOUR 3 — STRATEGY BUILDING

This is the turning point of the curriculum. Hour 3 transforms knowledge into action. Students learn to construct a rule-based trading strategy, manage risk scientifically, and validate their approach through backtesting before using real money.

MODULE
1-3

What is a Strategy | Components | Simple Example

40 minutes

A strategy is a rule-based system. Not guessing. Not feelings. Rules. Every single trade must have predefined rules for Entry, Stop Loss, and Target before the trade is placed. If any of the three is missing, it is not a strategy — it is gambling.

1. ENTRY	2. STOP LOSS	3. TARGET (TP)
Where you get IN to the trade The exact price condition that triggers your buy or sell.	Where you EXIT if WRONG The maximum loss you are willing to accept. Placed before entry.	Where you EXIT if RIGHT Your profit goal. Must be at least 2x your stop loss distance.
Example: Buy when price breaks above resistance with increased volume	Example: Place stop loss 1% below the entry candle low	Example: Set TP at 1:2 RR — risk Rs.1,000 to make Rs.2,000

"SIMPLE STRATEGY: Buy when price breaks above resistance -> SL below support -> Target = 1:2 risk"

MODULE 4

Risk Management — The 1-2% Rule

30 minutes

Risk management is the single most important skill for long-term survival as a trader. Without it, even a 70% win rate strategy can wipe out an account. The 1-2% Rule: never risk more than 2% of your total capital on any single trade. This ensures that even a losing streak of 10 consecutive losses only reduces your capital by 20% — giving you time to adapt and recover.

PARAMETER	VALUE	CALCULATION
Account Capital	Rs. 1,00,000	Starting capital
Max Risk per Trade (2%)	Rs. 2,000	$1,00,000 \times 2\% = \text{Rs. } 2,000$
Stop Loss Distance	50 points	Based on chart structure
Position Size (Qty)	40 shares	$\text{Rs. } 2,000 / 50 \text{ points} = 40 \text{ shares}$
Risk:Reward Ratio	1:2 minimum	Target = 100 points (2x stop loss)
Profit if Target Hit	Rs. 4,000	$40 \text{ shares} \times 100 \text{ pts} = \text{Rs. } 4,000$

MODULE 5 Backtesting

20 minutes

Backtesting is the process of applying your trading strategy to historical price data to see how it would have performed. It is the most important step between having a strategy and going live with real money. A strategy that has not been backtested is not a strategy — it is a hypothesis.

Step 1	Select a strategy from the platform UI (Trend Following, Simple BUY/SELL, Options ORB)
Step 2	Set your parameters: Stop-Loss %, Take-Profit %, Capital (Rs. 1,00,000), Time range (365 days)
Step 3	Click 'Run Backtesting' — the engine simulates every trade signal over the selected period
Step 4	Analyze results: Win rate, Max drawdown, Total profit, Best/worst trades
Step 5	Use 'AI-Filtered Comparison' to automatically test 100s of SL/TP combinations

"If you don't test your strategy... you are gambling."

HOOR 3 -- COMPLETE

"I can define and test a trading strategy"

KEY TAKEAWAYS

- OK A strategy MUST have Entry, Stop Loss, and Target — all defined before the trade
- OK Never risk more than 2% of capital on any single trade
- OK Position size = $(\text{Capital} \times \text{Risk}\%) / \text{Stop Loss distance}$
- OK Always backtest before going live — no exceptions

HOUR 4

Manual Limits | Algo Trading | AI Analysis | Automation Benefits | Live Demo

AI + AUTOMATION

60 MINUTES

CONFIDENCE -> EXCITEMENT

HOUR 4 — AI + AUTOMATION

This is the 'wow factor' hour. Students who were skeptical about trading will have their perspective completely shifted when they see how artificial intelligence and automation can remove every single weakness of manual trading. By the end of this hour, students should be excited — not just interested.

MODULE
1-2

Limitations of Manual Trading vs Algo Trading 30 minutes

Start this module by asking: 'What is the hardest part of trading for you right now?' Let students share. Every answer they give will appear in the comparison table below. This makes the data personal — not theoretical.

PROBLEM	MANUAL TRADING	ALGO / AI TRADING
Delay	Sees signal -> thinks -> acts (SLOW)	Executes in milliseconds
Emotion	Fear & greed override logic	No emotion — pure rules
Consistency	Varies day to day, mood to mood	100% rule-based, every time
Multi-tasking	Can only watch 1-2 markets	Monitors 100s simultaneously
Sleep	Can't trade while asleep	Runs 24/7, no breaks needed
Discipline	Breaks rules when losing	Rules cannot be broken — ever
Speed	Slow to exit losing positions	Exits at exact SL in real-time

"You define logic once... system executes forever."

MODULE
3-4

AI Signal Analysis + Automation Benefits 20 minutes

The AI Trading Analysis screen (Feature 2 of TradingSmart.AI) is a live demonstration of how artificial intelligence evaluates trading signals across 7 dimensions simultaneously. Open the platform on screen during this module.

SCORING MODULE	WHAT IT ANALYSES
Market Module	Analyzes overall market sentiment and direction
Trend Module	Identifies the dominant trend across multiple timeframes
Signal Module	Detects entry trigger signals using technical patterns
Volume Module	Confirms signal strength with trading volume
Volatility Module	Measures price volatility to adjust position sizing
Risk:Reward Module	Calculates optimal RR ratio for the current setup
TrapRisk Module	Detects potential bull/bear traps to avoid false signals

Signal Grading System:

GRADE	SCORE RANGE	MEANING	ACTION
Grade A	80 - 100	Very high conviction signal — all modules aligned	High confidence entry — execute strategy
Grade B	65 - 79	Good signal — most modules aligned	Proceed with caution — standard position size
Grade C	Below 65	Conflicting signals — mixed market conditions	Wait for score to rise above 75 before trading

MODULE 5 **Live Platform Demo**

10 minutes

End Hour 4 with a live, screen-shared demonstration of TradingSmart.AI. Walk through a real signal from analysis to execution. Students learn best by watching the full workflow in real-time.

DEMO
SCRIPT

- 1) Open AI Analysis -> 2) Identify strongest signal -> 3) Show entry/SL/TP -> 4) Open Backtesting -> 5) Run backtest on that strategy -> 6) Show results

HOOR 4 -- COMPLETE

"I want automation in my trading"

KEY TAKEAWAYS

- OK Manual trading has 7 structural weaknesses — algo trading eliminates all of them
- OK AI scores every signal across 7 dimensions — no subjective judgment
- OK Grade A/B = proceed | Grade C = wait for clarity
- OK The platform monitors markets 24/7 so you don't have to

HOUR 5

System Flow | Live Execution | Live Results | Real Expectations | Next Steps

FULL SYSTEM EXECUTION

60 MINUTES

EXCITEMENT -> ACTION

HOUR 5 — FULL SYSTEM EXECUTION

The final hour brings everything together. Students move from learning to doing. This hour is heavily practical — show them the complete pipeline, walk through a live trade, demonstrate the results screen, and end with honest expectations and clear next steps.

MODULE
1-2

System Flow + Live Execution Process

30 minutes

The complete TradingSmart.AI trading pipeline is a 5-step sequential process. Every single trade you take should follow these steps — no exceptions.

STEP	ACTION	WHERE IN PLATFORM
1. Create Strategy	Define your Entry, Stop-Loss, and Target rules in exact numeric terms	Strategy Builder section
2. Run Backtest	Validate strategy on 365 days of historical data — check win rate & drawdown	Backtesting Engine
3. Set Alerts	Configure push notifications for when your entry conditions are met	AI Analysis -> Set Alert button
4. Connect Broker	Link your brokerage account to enable automated order execution	Settings -> Broker Integration
5. Monitor Results	Track all open and closed trades with real-time P&L; in Active Trades screen	Active Trades dashboard

MODULE 3

Live Results Screen

20 minutes

Open the Active Trades screen live. Walk through every number visible on screen. Show students that results are transparent, real-time, and fully traceable. Use the example P&L; below (from the live platform) as a demonstration reference.

SYMBOL	SIDE	QTY	ENTRY PRICE	CURRENT PRICE	P&L;
NIFTY50	LONG	40	22,340	22,510	+Rs. 6,800
BTC/USD	LONG	0.05	42,150	43,200	+\$52.50
EUR/USD	SHORT	10,000	1.0892	1.0845	+\$47.00

Total P&L; Today: +Rs. 14,200 | Platform data is live and updates every second.

MODULE 4 Real Expectations

5 minutes

This is the most important honesty moment of the entire curriculum. Set expectations correctly. Students who understand reality from Day 1 build discipline. Students who expect instant profits quit after the first loss.

EXPECTATION	REALITY
Profit is guaranteed	Profit is NOT guaranteed. Results depend entirely on strategy quality and market conditions.
I will make money immediately	Learning takes time. Paper trade for minimum 30 days before using real capital.
Losses mean the system is broken	Losses are a normal, expected part of trading. Even good strategies have 30-40% loss rates.
More strategies = more profit	Consistency beats volume. Master one strategy thoroughly before adding more.

MODULE 5 Next Steps — Your Trading Journey

5 minutes

Week 1-2	Paper Trade Only	Use the platform's Paper Trade mode exclusively. Log every trade. Do NOT use real money. Build the habit of following your strategy rules.
Week 3-4	Review & Refine	Review all paper trades. Calculate your win rate, average gain vs average loss, and max drawdown. Identify patterns in your mistakes.

Month 2	Start Small (Real Capital)	Begin with minimum capital — 10-20% of your intended trading capital. Execute exactly as you did in paper trading. No impulsive changes.
Month 3+	Scale Systematically	Only increase position sizes after 60+ days of consistent, profitable trading. Let the data — not emotions — guide when to scale.

HOUR 5 -- COMPLETE

"I understand the full pipeline and can use it"

KEY TAKEAWAYS

- OK

 5-step pipeline: Chart Analysis -> Strategy -> Backtest -> AI Analysis -> Execution
- OK

 Paper trade for minimum 30 days before risking real capital
- OK

 Results depend on strategy quality — never stop backtesting
- OK

 The platform handles execution — your job is discipline and patience

"The market rewards patience, discipline, and systems. It punishes emotion, guessing, and shortcuts."
